Y99AU-2

Ignition Control Service Kit

Description

The Y99AU-2 is a specially designed service kit for all Johnson Controls electronic ignition systems. Test equipment and information for troubleshooting and servicing are included in one convenient package. It contains the following items:

- Fluke® Model 73 Digital Multimeter
- Y99AU-3 Signal Transducer
- Y99AW-1 Flame Simulator
- Service Literature Pack

The Fluke digital multimeter is used for all current and voltage measurements. The signal transducer allows for easy measurement of flame sensing current down to 0.001 microamps. The literature pack consists of all current bulletins, installation, and operation instruction sheets, and service guides for ignition controls, including the new G600 and G670 Replacement Ignition Controls.
