

Controls Cabinets

Now available with a slimmer profile for electronic or pneumatic controls

Building Technologies

SIEMENS

Slim line design, monotone color keeps electronic controls under cover in your facility

Now there's a new option for electronic controls, Siemens introduces a low profile cabinet - measuring just six inches deep. Available in four sizes, the lighter weight slim line cabinets make installing and mounting fast and easy. Rated NEMA 1 for indoor use, the cabinets are manufactured under UL 508 Industrial Control Panel Enclosure specifications and are CSA approved under LR8414.

Standard features include:

- Cabinets are symmetrical, providing the flexibility to mount so the door opens to the left or right.
- Doors are removable, allowing easy access for punching additional cutouts.
- Perforated mounting plates are removable, allowing easy mounting of controls and knockouts.
- Locks are keyed identically.
- Cabinets can be wall or floor mounted (kits available).

Monotone gray color is identical for both electronic and pneumatic controls for a uniform look across your entire facility.

Description	Dimensions in inches (mm)	Part No.
#1 Pneumatic or Electronic Controls Cabinet	19-1/2 (495) × 16-3/8 (416) × 5-3/4 (146)	567-351
