TL-CWCVT Tool & Connected Workflow Application (CWa)

What is it?

The new TL-CWCVT tool from Johnson Controls replaces the previous generation Map tool (TL-Map1810).

- It's half the size of the previous gateway.
- Faster start-up: Boots up in half the time!

How it works:

The Connected Workflow Wireless MS/TP Converter (CWCVT) enables a temporary wireless connection between:
- A laptop running Johnson Controls BAS Tools
- BACnet MS/TP controllers wired to an MS/TP bus

Connected Workflow Application (CWa)

The CWa is a mobile tool designed for field technicians to:
- Streamline workflows
- Commission and validate BAS equipment at customer sites

Key Features:
- Wireless Connection: Pair with the CWCVT for seamless communication, application downloads, and equipment commissioning.
- Troubleshooting Support: Includes clear troubleshooting guidance.

Compatibility:
- Available for Android and iOS devices.
- Downloadable from the Google Play Store or Apple App Store.

Limitations:
- Not intended for use with Smoke Control systems or Metasys for Validated Environments.
